Rezki Boureghdad

Back-end & Data Engineer

PROFILE

Back-end and data engineer at Solrus, a software studio in Algiers. I build the Python services, PostgreSQL data models and REST APIs behind large, multi-service B2B platforms: event-driven with FastAPI, Kafka and Redis, and delivered test-first. Five years of freelance delivery before and alongside it, and a part-time computer-science teaching assistant at Université M'Hamed Bougara.

EXPERIENCE

Data Specialist, Structure & Architecture
Jun 2025 – Present

Solrus — software studio, team of 4–8 · Algiers, remote-first · back-end & data engineering

- Back-end and data engineering for large, multi-service B2B platforms (confidential clients): domain models, PostgreSQL schemas and Alembic migrations, REST API contracts, third-party integrations.
- Build event-driven, async Python services (FastAPI, SQLAlchemy 2, Kafka, Redis, Celery), and profile and tune them for latency and reliability.
- Security in the design from the start: role-based access, 2FA, audit trails, data-residency compliance, hardening before audits.
- Review much of the team's work, mainly by writing and running test scenarios: pytest against real PostgreSQL, Playwright end to end. Work daily with front-end, AI and product teammates.

Freelance Full-Stack Developer
May 2021 – Present

Self-employed (auto-entrepreneur) · contract-based, full-time when engaged

- 10+ client projects and feature builds for businesses and community organisations, from scoping and prototype to deployment (web, mobile, AI).
- Tested and debugged **Zakat.business**, a non-profit startup that won a Label award.

Teaching Assistant — Computer Science
Nov 2024 – Present

Université M'Hamed Bougara, Boumerdès · part-time, up to 12 h/week

- Tutorials and labs across 12 subjects for Software Engineering and LMD students, Bachelor's and Master's level, plus extra support sessions.
- Design exercises and assessments, from first programming courses to formal semantics.

Development Mentor
Oct 2024 – Sep 2026

DevUp Club, Université M'Hamed Bougara

- Designed and ran practical software-engineering workshops for students, with hands-on material that participants applied to real projects.

EDUCATION

MSc Software Engineering & Data Science
Université M'Hamed Bougara, Boumerdès · Jan 2024

BSc Computer Science
Université M'Hamed Bougara, Boumerdès · Jan 2022

SUBJECTS TAUGHT

Algorithms & Data Structures

Databases

Programming Languages (intro → advanced)

Compilation

Semantics

+ 7 other CS modules

CERTIFICATIONS

NVIDIA
Fundamentals of Deep Learning · Intro to Machine Learning

Neo4j
Graph Data Science · Fundamentals · Graph Data Modeling

EF SET English
73/100 — C2 Proficient

SELECTED PROJECTS

claim-bot — migration-number Discord bot

Own tool

- Reserves the next migration number before the file exists, so developers never collide. Merges committed files from the GitHub API with open claims, and checks the Alembic chain for extra heads, broken links and cycles.

Python · discord.py · GitHub GraphQL · Alembic

DocMCP — local PDF search server for AI tools

Open source

- Ingests PDF folders into ChromaDB and serves them to any MCP client (Kiro, Claude Code) as semantic-search tools. Fully local: ONNX / sentence-transformer embeddings, LLM on Ollama.
- Recursive Language Model reasoning: a local LLM explores the full documents in a Python REPL instead of relying on top-k chunks. Web UI and one-command Docker setup.

Python · Node.js · MCP · ChromaDB · Ollama · Docker · github.com/V0idSeeker/RAG-MCP

Forsa / Aamal ATS — recruitment platform

Solrus public case study

- Connects companies, independent recruiters and job seekers in Algeria. Semantic job matching with sentence-transformer embeddings and location search with PostGIS.
- WebSocket chat, community forum, FCM push notifications, SlickPay subscriptions, JWT/Argon2 auth. Flutter mobile app and admin panel.

FastAPI · PostgreSQL/PostGIS · Flutter · Docker

e-motion — back-office for cash-on-delivery shops

In use

- Built for an e-commerce business that runs its orders, stock, couriers and expenses on it, with real profit per order. Weighted-average purchase cost, stock that can never go below zero, alerts for customers who often cancel or return, and an audit log.
- Excel import, packing slips, English/French interface. Runs on free hosting tiers.

Next.js · TypeScript · Supabase · Vercel

VoidSketches — free CS lessons through analogies

Own product

- Animated, narrated lessons in English and French, one concept each, starting with compilation. Local TTS pipeline whose timings drive animation and captions.

React · Vite · TTS · voidsketches.vercel.app

Community apps — Ahl Quran & 7alkaty

Community

- **Ahl Quran:** multi-tenant Quran-school manager for study circles, attendance and progress (FastAPI, PostgreSQL, Flutter).
- **7alkaty:** mosque course and imam-following app with scheduled push notifications (Node/Express, MongoDB, Expo).

Forest-fire detection & reporting

Master's thesis

- Co-designed a three-part system: a citizen reporting app, a data platform and alerting. Detection models built with YOLO and Faster R-CNN.

Python · YOLO · R-CNN · Flutter · Firebase

ISO 27001 skill for Claude Code

Tooling

- Checks a codebase against ISO/IEC 27001:2022, plans the rollout step by step, and checks every edit with a scanner hook.

Python · Security compliance · AI tooling

SKILLS

Back-end
Python, FastAPI, Django/DRF, SQLAlchemy 2 (async), Alembic, Pydantic, Celery, REST APIs, Node/Express

Data
PostgreSQL/PostGIS, SQL, Redis, Kafka, MongoDB, Neo4j, Supabase

AI / ML
RAG, MCP servers, FAISS/Chroma, embeddings & reranking, LLM APIs, YOLO/R-CNN

Front & mobile
TypeScript, Next.js, React, Flutter/Dart

Ops & quality
Docker, nginx, GitHub Actions, Vercel, Grafana/Loki, pytest, Playwright

Security
JWT, Argon2, OAuth2, TOTP 2FA, ISO 27001, data residency

Also
Contract-first API design, decision records, test scenarios as review, AI-assisted development

CS FOUNDATIONS

Algorithms & complexity

Compilers & formal languages

Formal methods (PhD interest)
